

BOOTSTRAP | DAY 2 | CLASSWORK

Basic Exercise | Adding Navbars

We will continue improving the example from day 1 (from the section "Basic Bootstrap Template") using the technologies we learnt so far - feel free to add more Bootstrap components! Create several different versions of this template with some navbars: use fixed top navbar or fixed bottom navbar in the first version, and also create a responsive dark navbar in a second version. Feel free to create a few more versions based on your inspiration.

Advanced Exercise | Navigation

Let's play a little bit with drop-down navigation elements. You should create a template that can provide the basic information about your favorite movie. At the top navigation, you should have at least three navigation items. On the actors page you should have a stackable navigation on the left (tip: see vertical pills). On the right side, you should have the content about each actor. You can find the movie description on the Internet, as well as images and create a nice responsive web page which will represent your favorite movie in the best way. Feel free to use as many Bootstrap elements as you want. Be creative! You can create more pages with the same layout and link them.

Here you have an example of how this could be structured:

[Actor 1](#)[Actor 2](#)[Actor 3](#)[Actor 4](#)[Actor 5](#)[Actor 6](#)[Actor 7](#)

Actor 3

Lorem ipsum dolor sit amet consectetur adipisicing elit. Expedita libero repudiandae eos magnam animi nisi adipisci sapiente. Incidunt voluptate magni aut id, tempore vero iure autem itaque consectetur veniam praesentium. Sequi voluptatibus illum unde blanditiis itaque natus, sapiente cupiditate molestiae nam atque nobis aliquid quas, ipsam molestias, fuga laudantium aspernatur sint earum incidunt excepturi doloribus. Maxime iusto ipsam nobis quas!

Challenge | Travel Agency website

Are you satisfied how you represented your favorite movie using Bootstrap and responsive design? Now it is time to create a website for the travel agency "Mount Everest" (based in Vienna). They want a nice looking responsive website and they insist on using the Bootstrap framework. They want to present their offers, destinations and client recommendations. It is extremely important for them to have a mobile-friendly website. You should add a Hero section with a carousel in an appropriate location. Insert the most popular destination with some text and a nice background image. Feel free to add more Bootstrap components to this website and create at least two more pages.
