

JAVASCRIPT | DAY 6 | CLASSWORK

Basic Exercises

Exercise 1:

Based on the following two Objects definitions:

```
let sandwiches = `{ "sandwich": "hamburger", "calories": "260" }`;  
let fries = `{ "fries_size": "Large French Fries", "calories": "570" }`;
```

Print the following message within the browser:

My favorite sandwich is a Hamburger which has approximately 260 calories, along with it I enjoy eating Large French Fries which have about 570 calories.

Intermediate Exercises

Exercise 1:

Create a JSON file which contains the following details per employee:

- Unique ID
- First Name
- Last Name
- Email address
- Job Title
- Salary

Fill the JSON file with meaningful data for 10 Employees. Print each employee's details in a table which will look representative and easily readable for the management team.

Advanced Exercises

Exercise 1 : Book List

Create an external JSON file that will contain the data(e.g.

```
{'title': 'Javascript for Dummies',
```

```
'author': 'Dummy Dumb Dumb',
```

```
'read': 'false'
```

```
}`
```

1. Iterate through the array of books. For each book, create a `<p>` element with the book title and author and append it to the page.
2. Each book should have an image cover.
3. Change the style of the book depending on whether you have read it or not.
