

PHP | DAY 7 | CLASSWORK

Exercise 1

Create a login system for one of your projects from previous days(e.g blog, hotel, etc.). This login system should have sessions for users and admins.

The admin can manage all users and can perform the whole CRUD.

The users can see their own information and can ONLY update their own information(user information).

Exercise 2

Extend the previous exercise, where another table can be seen by the users. Additionally, the admin can manage the full CRUD of this table.

E.g. Restaurant- admin can add/remove/edit the dishes, the user can only see these meals.

NOTE: If you do not manage this today, we will be covering this point tomorrow :)
