JAVASCRIPT | DAY 8 | CLASSWORK

Exercise 1

You will create a shopping cart today for a florist that sells a variety of flowers.

Additionally to the standard features(add to cart, change quantity, remove from cart and showing total sum), you should implement the following:

- showing the amount of items in the cart
- giving and displaying a discount if the amount is over a certain amount (e.g. 10% on EUR 100,- purchase)
