PHP | DAY 8 | CLASSWORK

Basic Exercises

Exercise 1

Let's practice what we learned yesterday. Put together the login system and the Products CRUD as per pre-work.

Exercise 2

Create a Login System with a CRUD application choosing one of the below themes:

- Restaurant booking system
- Car rental
- Hotel booking

There should be the tables user, booking and restaurant || car || hotel. The user should be able to book a restaurant table || a car || hotel room. The booking table should have a column to hold the foreign key from the user.

Challenge

Extend the previous exercise 2 and create a status to control whether a restaurant || car || hotel is available or not. If not, it should not be displayed as an option for booking.

The admin in this case should be able to see the bookings and which user has a booking for which restaurant || car || hotel. You can be creative and extend your solution.
